## OFOQ Human Resources Software

- The environment within which an organization operates is dynamic. Rules of the game are changing; an organization must adapt new strategy to remain competitive including the human resources management strategy.
- No longer is human resources strategy simply personnel management, in fact human resources management is one of the key considerations for ensuring overall success of the organization.
- United OFOQ HR solution has been designed and built on the approach of offering a parameterized and flexible, full-integrated HR system modules required to cover different business requirements.

- In fact, OHR is not just an Management information system for HR & Payroll, it is in addition an accumulation of best practices and experience of around 60 organizations have participated by a way or another in building the maturity of this product currently has. On the other side, OFOQ pay a great attention to the business value demission offers with the product accordingly it offers the following capabilities:

### **1. Flexible System:**

- ◆ OHR product is running in organizations of different industries, sizes (from 50 to 22'000 employees), different countries with different languages, multi-company or single one, and multi-currency or not
- ◆ Platform independent and database independent

### **2. Business best practices:**

- ◆ The system is optionally offered with complete standard job description covering job qualifications, competencies, tasks, responsibilities and working conditions for around 1000 job around the globe for almost all of the industries.
- ◆ The system has around 150 standard report out-of-the-boxes. These reports have been enrichment by the OHR current 60 usage and enhancements.

- ### **3. Drill-Down capabilities is one of the major aspects of good analysis tools and OHR has this capability through the analytical decision-support report which will be covered in later paragraph within this section.**

- The audit trail feature is one of the standard features of the OHR, using this feature which has the flexibility to be enabled or disabled for user-chosen OHR functions, the system logs all the information about the data changes, login and logout for each user of the system recording the old & new data value, date & time, workstation in addition to the user and function.
- The current web-features of the OHR through the Employee Self-Service allowing the employee themselves to anticipate in their HR related activities in addition to their subordinate – related HR activities as manager.

  - ◆ Additional services, migrations and upgrades for existing customer
  - ◆ Remote and on-site support services for existing and new customers
  - ◆ Customization, integration and additional development.
  - ◆ Field level extensions (pervasive based solutions) for JD Edwards

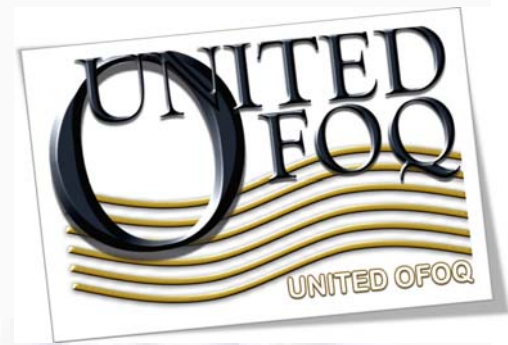

## OFOQ Baggage Handling & Reconciliation Software

- OFOQ Baggage handling & Reconciliation System (BRS), with its innovated wireless technology, complies with the IATA 1745 Recommend Practice; it is integrated with the airport DCS, and is built on J2EE technology.
- OBRS Effectively guarantees that all the passengers and their baggage are on the same right aircraft. The system handles variety of baggage types; it handles Local and Transfer baggage, as well as Limited Release, Rush, Interline, Crew Baggage, AVI (Animal).

## Pervasive based solutions equipped with automatic data capture & identification

- For years, the Management Information Software solutions were running over the classical terminals and desktops running over hardwired networks limiting the solutions field capabilities. Today, the technology offers a solution for mobilizing the Management information software solution to be more field oriented and able to increase the systems availability empowered with the Automatic Data Capture techniques.
- United OFOQ offers this type of solution covering its Online and Offline types:
- The online wireless Pocket PC based solutions are suitable for static field level businesses like warehouse management, shop floor data collections systems and Baggage Reconciliation systems.

- The offline pocket PC based with docking station synchronization solutions is suitable for dynamic field level businesses like van sales and distribution and courier delivery services.
- OFOQ expertise is extended to cover the essential integration and interfacing between these solution and backbone systems of the organizations like ERP's and financial system.
- Pervasive computing solution is extremely empowered with automatic data capture technologies which provide faster, accurate and smooth data collection. OFOQ is experienced in utilizing the classical mature barcode technology in addition to the newest data capture technologies RFID.
- As a normal extension of United OFOQ expertise in different solution areas, in addition to the principal strategy for the early adoption of technology, United OFOQ has established aggressive plans for expanding in Mobile Computing and Data Capture solutions, which enables OFOQ to propose different business solutions covering the online and offline pocket PC solutions.
- RFID data capture is a revolution in the data capture technology. RFID technology allows S/W systems to identify objects without having a line of sight or direct contact between the identifier and the reader, and thus presents a revolution in the capture applications for industrial and commercial retail applications. Combining the RFID technology with the mobile computing technology for field based industries takes you into another dimension of software solutions

## IBM Software Based Solutions & Services

### ➤ IBM Content Management

- ◆ IBM® content management helps integrate and deliver critical business information on demand. IBM software and solutions support challenging information types such as images, documents, e-mail, web content, e-records, multimedia, computer report output and more. The comprehensive content management portfolio assists organizations that must improve productivity, enhance responsiveness, and comply with regulatory demands.

### ◆ Lotus Notes/Domino

Lotus Notes and Domino are collaboration software. Notes are the email, calendar & scheduling, and information management client. Domino is the integrated messaging, collaboration, and Web application server.

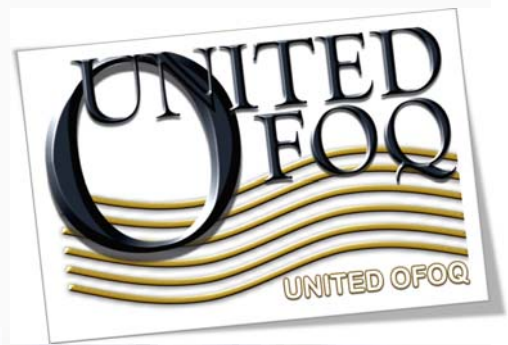

### ◆ Lotus Workflow

Lotus Workflow is a workflow application development tool that provides the ability to develop, manages, and monitors business processes and helps eliminate the downfalls of paper-based work. It is an integral part of knowledge management.

**Lotus.** software

### ◆ Lotus Workplace

IBM® Workplace™ Collaboration Services is a single product that provides a full range of integrated ready-to-use communication and collaboration tools that enable people to do their jobs more effectively – anytime, anywhere.

- ◆ With the flexibility to deploy any mix of capabilities, it provides a ready-made foundation to build customized role-based Workplace environments that provide the tools and information people need to do their work more efficiently.

- ◆ **Web Sphere Application Server**

As the foundation of the Web Sphere software platform, Web Sphere® Application Server V6.0 is the industry's premier Java™-based application platform, integrating enterprise data and transactions for the dynamic e-business world. Each configuration available delivers a rich application deployment environment with application services that provide enhanced capabilities for transaction management, as well as the security, performance, availability, connectivity, and scalability expected from the Web Sphere family of products.

## **Rational.** software

- ◆ **IBM Rational suite**  
IBM Rational Performance Tester simplifies performance test creation, execution and analysis to help teams validate the ability of their applications to accommodate high multi-user loads before deployment. Introducing a variety of ease-of-use features to help teams rapidly detect system bottlenecks.
- ◆ Rational Performance Tester ensures both the novice and expert tester achieve day-one productivity, improving a team's ability to validate Web scalability and reliability.
